Profile Summary

Full-Stack GenAI & Product Engineer with 4 years of experience building AI-powered applications, scalable REST APIs, and end-to-end data pipelines. Skilled in LLM integration (RAG, Agents, Prompt Engineering), GenAI product development, and full-stack development using FastAPI, Django, and React. Experienced working with international startups across remote environments, delivering high-impact products end-to-end.

Technical Skills

GenAI / LLM: LangChain | LlamaIndex | RAG Pipelines | LLM Fine-tuning | Prompt Engineering | LLM Agents | OpenAI API | Hugging Face Transformers | Sentence-BERT | CLIP | FAISS | Vector Databases | Embeddings | Function Calling

Backend: Python | FastAPI | Django | Django REST Framework | GraphQL | PostgreSQL | SQL | RabbitMQ | Redis | WebSockets | REST APIs

Frontend: React | Redux | JavaScript | HTML5 | CSS3

DevOps / Cloud: Docker | Kubernetes | GitHub Actions | CI/CD | Nginx | AWS | Azure | TDD | Agile/Scrum

Domain & Business Understanding: CPG (Consumer Packaged Goods) | Demand & Supply Forecasting | Inventory Replenishment Planning | Shortage Detection | Promotional Incrementality | Retail Analytics | Supply Chain Planning | Loyalty Program Analysis | B2B Commerce

Experience

MathCo | Full-Stack & GenAI Engineer

Dec 2024 – Present | Bengaluru

- Engineered an internal **UI-as-Code framework** in Python, enabling any Python-literate engineer to build fully functional web applications without HTML/CSS/JS — reduced project delivery time and freed the data science team to focus on business problems rather than frontend engineering.
- Built **demand & supply intelligence pipelines** delivering detailed business analysis including shortage forecasting, inventory replenishment planning, and supply gap identification — enabling faster and more accurate supply chain decisions for clients.
- Architected a **GenAI-powered agentic data pipeline** using LangChain Agents + OpenAI GPT-4o, automating feature engineering for retail promotion analysis — replaced manual workflows and cut client delivery turnaround by ~40%.
- Designed and shipped **LLM-powered internal tooling** with FastAPI + Streaming responses, exposing GenAI capabilities as clean REST APIs consumed by internal dashboards. productionized on AWS (Lambda + API Gateway) with auto-scaling.
- Implemented **RAG architecture** using FAISS vector store + OpenAI Embeddings to enable semantic search over internal retail datasets — reduced ad-hoc analyst queries by making insights self-serve.
- Owned full product lifecycle — solution architecture → prompt design → API development → cloud deployment — collaborating with data scientists, analysts, and client teams in an agile environment.

Digitalflake | Full-Stack Software Engineer

Sep 2022 – Nov 2024 | Pune

- Architected and built a full **ERP system from scratch** (FastAPI + PostgreSQL + React/Redux) for a South Africa-based agri-tech startup — sole backend architect, collaborating directly with the founder across international time zones.
- Designed scalable **RESTful APIs** and optimized PostgreSQL schemas for inventory, pricing, order tracking, and RBAC; reduced query latency.
- Built a real-time **B2B vendor-buyer portal** with Django Channels (WebSockets) for live order updates and chat, handling 500+ concurrent connections.

- Set up an end-to-end **CI/CD pipeline** (GitHub Actions + Docker + Nginx) with automated linting and testing, achieving 85%+ test coverage; mentored junior engineers on API design best practices.

Key Achievements

Python UI-as-Code Framework

Engineered an internal product at MathCo that allowed the entire data science team to independently build and deploy web applications using simple Python, with zero frontend dependency — reduced project delivery time and shifted team focus from tech implementation to business impact.

Demand & Supply Intelligence Product

Built end-to-end pipelines delivering detailed supply chain analysis (shortage forecasting, inventory replenishment, supply gap detection) to business stakeholders — enabling proactive planning and reducing stock-related revenue loss.

Education

Bachelor of Computer Science – Savitribai Phule Pune University, Maharashtra

2018 – 2021

- Specialization in Mathematical and Computer Engineering

Additional Information

Languages: English (Professional) | Hindi (Native) | Marathi (Native)

Work Style: Agile/Scrum | TDD | Remote-first | Cross-timezone collaboration (US, South Africa, India)
